Adjacent Aerospace Suppliers: Tessera, Orion Industries & Exotic Metals Forming (Excluded from Core 67)

Published: November 16, 2026 · Canonical URL: https://bcesg.org/adjacent-general-aerospace-auburn-kent-group/

Verification & Scope Baseline: Tessera (Auburn), Orion Industries (Auburn), and Exotic Metals Forming (Kent) are classified as adjacent in BC ESG's frozen census and excluded from the 67 core space-company total.

ID	Company	City	Tier	Census Size Signal
WA-SPC-069	Tessera	Auburn, WA (50,000 sq ft facility)	adjacent	50,000 sq ft Auburn CNC/fabrication plant (titanium, Inconel, aluminum)
WA-SPC-070	Orion Industries	Auburn, WA (1590 A St NE, 100k sq ft) / Mukilteo, WA	adjacent	100,000 sq ft Auburn aerospace sheet-metal/CNC plant (Boeing Supplier of the Year)
WA-SPC-071	Exotic Metals Forming (Parker Aerospace)	Kent, WA	adjacent	High-temp Inconel/titanium/monel aerospace exhaust & ducting fabricator

Why These Three Plants Are Labeled Adjacent, Not Core

During Step 0 verification, BC ESG confirmed physical manufacturing plants for `Tessera` (50,000 sq ft in Auburn), `Orion Industries` (100,000 sq ft at 1590 A St NE in Auburn plus Mukilteo operations), and `Exotic Metals Forming` (a Parker Aerospace division in Kent) (`CLM-01`, `CLM-27`).

However, public records identify all three primarily as general aerospace precision machining, sheet-metal, or high-temperature exhaust/ducting suppliers (such as commercial aviation programs) without a publicly attributed space-specific unit. To avoid inflating the 67-company core space count—a common driver of the 90-vs-67 gap—all three are tracked strictly as **adjacent**.

Valley Continuity & Supply-Chain Disclosure Exposure

All three facilities sit in the Green/White River industrial corridor (Auburn and Kent) and face Tier-2/Tier-3 Scope 3 supplier questionnaires whenever prime aerospace and space OEMs request facility-level emissions or continuity attestations (`CLM-27`, `CLM-28`).
